

## DILAPAN-S – the Hygroscopic Cervical Dilator

A hydrophilic polymer rod used for dilation and ripening of the cervix, single use.

When inserted into the cervical canal, these sterile rods act in two ways:

- Draws fluid from the cervical tissue into the rod causing expansion of the rod, which produces an outward radial force.
- Initiates endogenous prostaglandin release causing collagen degradation, which softens the cervix.

### Dilation and Ripening

- One DILAPAN-S, 4 mm, in situ for four hours achieves 10-11.2 mm dilation.
- One DILAPAN-S, 3 mm, in situ for four hours achieves 8.37-9.45 mm dilation.

### Features and Benefits

- Sterilized using irradiation.
- Made from a synthetic polymer so there are no drug side effects.
- Extremely resistant to breakage – elastic characteristics allow for safe removal even when entrapped.
- Manufactured product guarantees consistency of action.
- Manufactured in an ISO 9001 certified facility and certified under the Medical Device Directive (EN46002).

### Availability

DILAPAN-S is available in three sizes:

- 4 mm x 65 mm, **Ref. 24150**
- 4 mm x 55 mm, **Ref. 24154**
- 3 mm x 55 mm, **Ref. 24153**
